## LE LABORATOIRE CENTRAL DE SURVEILLANCE DE LA QUALITE DE L'AIR

---

Le Laboratoire Central de Surveillance de la Qualité de l'Air est constitué des laboratoires de l'IMT Lille Douai, de l'INERIS et du LNE. Il mène depuis 1991 des études et des recherches à la demande du Ministère chargé de l'environnement, et en concertation avec les Associations Agréées de Surveillance de la Qualité de l'Air (AASQA). Ces travaux en matière de pollution atmosphérique ont été financés par la Direction Générale de l'Énergie et du Climat (bureau de la qualité de l'air) du Ministère chargé de l'Environnement. Ils sont réalisés avec le souci constant d'améliorer le dispositif de surveillance de la qualité de l'air en France en apportant un appui scientifique et technique au ministère et aux AASQA.

L'objectif principal du LCSQA est de participer à l'amélioration de la qualité des mesures effectuées dans l'air ambiant, depuis le prélèvement des échantillons jusqu'au traitement des données issues des mesures. Cette action est menée dans le cadre des réglementations nationales et européennes mais aussi dans un cadre plus prospectif destiné à fournir aux AASQA de nouveaux outils permettant d'anticiper les évolutions futures.

## **1. LIST OF THE APPENDIXES**

---

<b>Appendixes</b>	<b>Titles</b>
Appendix 1	Summary of the Z scores obtained by each laboratory for all the compounds
Appendix 2	Data collected, averages and repeatability standard deviations for all the laboratories.

## **APPENDIX 1**

---

**SUMMARY OF THE Z SCORES OBTAINED BY EACH LABORATORY FOR ALL THE COMPOUNDS**

**18/172774 F1 - Z scores of laboratories by parameter**

## **APPENDIX 2**

---

### **DATA COLLECTED, AVERAGES AND REPEATABILITY STANDARD DEVIATIONS FOR ALL THE LABORATORIES.**

All raw data for all participants and materials are presented here.

**Table 1 - 18/172774 - F - Blanc - Benzo[a]anthracene - Raw data in ng/filter**

Lab ID.	Observation
180402	extraction à l'hexane/éther diéthylique (90/10)
180405	Obs Poussière MRC1
180415	
180429	
180430	BbF and BjF data are not individual compounds but together. ?BbjF result are: Replicate 1: 0.91 Replicate 2: 0.79 Replicate 3: 0.96 Replicate 4: 0.92 Uncertainty value (k=2)=1.81%
180437	Inteférent sur le DiBenzo(a,h)anthracene pas de résultat
180441	incertitudes selon la norme NF 11352
180453	Les résultats sont rendus sur une prise d'essai de 50 mg, directement à partir du flacon, le lendemain de la réception (conservation à 5°C±3°C). Le laboratoire ne possède pas d'enceinte de stockage capable de réguler la température, le taux d'humidité, et d'assurer la non contamination des flacons ouverts comme demandé dans les consignes. Pour se rapprocher de ces consignes, nous avons utilisé un dessicteur équipé d'une sonde de suivi de température et d'humidité. Le flacon a bien été ouvert et le stockage a duré 4 jours (pendant le Week End). Nous avons eu des difficultés à maintenir un taux d'humidité entre 45 et 50 % (Valeurs comprises entre 50-80%). Nous pourrons, vous fournir le graphique de suivi de la température et du taux d'humidité. La comparaison des données montre une perte de plus de 10% pour l'analyse des poussières exposées aux conditions prescrites ci-dessus, des composés suivants : benzo(a)anthracène, benzo(j)Fluoranthene, benzo(g,h,i)pérylène et indéno(1,2,3-c,d)pyrène. Les résultats peuvent vous être fournis sur demande.
180458

Table 55 - 18/172774 - MRC2 - Observations

Lab ID.	Observations
180402	extraction à l'hexane/éther diéthylique (90/10)
180405	Obs Poussière MRC2
180415	
180429	
180430	BbF and BjF data are not individual compounds but together. ?BbjF result are: Replicate 1: 0.99 Replicate 2: 0.96 Replicate 3: 0.98 Replicate 4: 0.97 Uncertainty value (k=2)=0.24%
180437	Intéférent sur le DiBenzo(a,h)anthracene pas de résultat
180441	incertitudes selon la norme NF 11352
180453	Les résultats sont rendus sur une prise d'essai de 50 mg, directement à partir du flacon, le lendemain de la réception (conservation à $5^{\circ}\text{C} \pm 3^{\circ}\text{C}$ ). Le laboratoire ne possède pas d'enceinte de stockage capable de réguler la température, le taux d'humidité, et d'assurer la non contamination des flacons ouverts comme demandé dans les consignes. Pour se rapprocher de ces consignes, nous avons utilisé un dessiccateur équipé d'une sonde de suivi de température et d'humidité. Le flacon a bien été ouvert et le stockage a duré 4 jours (pendant le Week End). Nous avons eu des difficultés à maintenir un taux d'humidité entre 45 et 50 % (Valeurs comprises entre 50-80%). Nous pourrons, vous fournir le graphique de suivi de la température et du taux d'humidité. La comparaison des données montre une perte de plus de 10% pour l'analyse des poussières exposées aux conditions prescrites ci-dessus, des composés suivants : benzo(a)anthracène, benzo(j)Fluoranthene, benzo(g,h,i)pérylène et indéno(1,2,3-c,d)pyrène. Les résultats peuvent vous être fournis sur demande.
